1. PURPOSE AND SCOPE

The purpose of this study is to examine the results of the 2023 year-end cumulative default rate statistics and transition matrix, which were prepared in accordance with Articles 25 and 26 of the "Regulation on Principles Regarding Authorization and Activities of Rating Agencies" which was published in the official newspaper on April 17, 2012, with the number 28267. According to Article 25 of the Regulation, the results should be shared with the public.

Within the scope of the study, credit rating observations made between 2008-2023, all on demand and contractual, were considered. Corporate Governance Ratings are excluded.

2. DATA ON OBSERVATION

When determining the cumulative default rate for defaulted customers, the rating they had ninety days prior to their default date is considered. Customers that aren't included in this scope are excluded from the observation data.

There is a total of 5,943 rating observations between 2008-2023, both on demand and contractual, and a total of 74 default cases related to these observations.

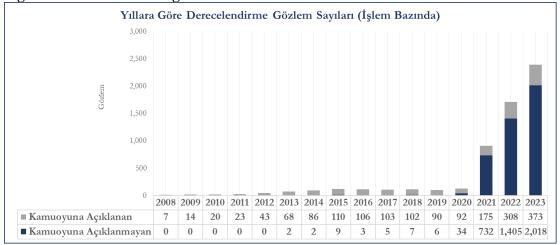

The distribution of the mentioned observations by years on the basis of the rating transaction is given in the table and graphic below.

Table 1: Number of Rating Observations Based on Transaction

| Number of the Rating Observations Based on Transaction | | | | | | | | | | | | | |

3. CUMULATIVE DEFAULT RATES

The cumulative default rate represents the default rate of customers for a certain period of time given the same rating and is calculated for each rating in the master rating scale used by our institution.

The Banking Regulation and Supervision Agency has the authority to determine our institution's ratings' credit quality level equivalent which is used to calculate the capital adequacy ratio, and the determined ratios are announced to public on the Banking Regulation and Supervision Agency's (BRSA) website.

For each rating in the master scale, it is analyzed for the purpose of matching and reviewing of BRSA;

- The three-year cumulative default rates for the last two years,
- The ten-year averages of the three-year cumulative default rates

The results are given below.

When determining three-year cumulative default rates for defaulted customers, the ratings ninety days prior to their default date is considered. The calculation of the cumulative default rates is based on the on-demand ratings given as a result of the methodologies used by our institution itself.

The annual numbers of observation on the basis of rating is given in the table below.

As the three-year period has elapsed for companies rated in 2020 and prior, the defaults of mentioned companies within this timeframe have been factored into the table provided. Conversely, for companies rated in 2021 and onward, the observation periods are shorter due to the incomplete three-year span. For instance, a company rated in June 2022 is subject to an 18-month observation period, whereas a company rated in June 2023 is assessed based on only a six-month observation period.

For the attainment of **comparable and meaningful outcomes**, it is essential that the three-year observation period be completed for the cumulative default rates. Within this context, the three-year cumulative default rates have been computed in the table below based on the final year of the three-year observation period. For instance, the rate calculated for 2023 signifies the default rates in 2023, which marks the culmination of the three-year observation period corresponding to the credit ratings assigned in 2020.

Table 7:3 Years Cumulative Default Rates per Rating According to Years

As can be seen from the table above, the 3-year cumulative default rates do not produce reliable results due to the very low number of defaults and observations. Since most of the assigned ratings belong to 2021 and later and not inclusion of these ratings to this study as the 3-year observation period has not been completed yet result in the lack of enough observation and default data to produce reliable results on a rating basis. When 3-year cumulative average default rate of last ten years is analyzed, it's impossible to make a sound assessment as there are no observations in the B+ and lower ratings (2020 and before). Since there are not enough observations for ratings above B+, the rating notches are grouped and the results of the study are given in the table below.

Table 8: Number of Observations per Rating Groups According to Years

| B+ to B- | | | | | | | | | | | |
| CCC & Below | | | | | | | | | | | |
| Total | 0.0% | 0.0% | 2.9% | 10.2% | 9.2% | 7.3% | 5.6% | 2.8% | 1.0% | 1.6% | 4.1% |

There is no observation data for ratings B+ and below thus it's impossible to make a sound assessment for last two years (2019 & 2020). When 3-year cumulative average default rate of last ten years is analyzed, it is clear that the rating groups with observations (no observations at B+ or below) have a substantial default rate trend. In addition to distributions above, the tables below show observation and default numbers as well as cumulative default rates for investable grade and below investment grade levels.

Table 11: Number of Observations Based on Rating Level According to Years

| Rating Level | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 | Total |
|------------------|------|------|------|------|------|------|------|------|------|------|------|------|------|------|-------|-------|-------|

Table 13: 3 Years the Cumulative Default Rates Based on Ratings Level According to Years

| Rating Level | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 | Last 10 Years Avg. |
|------------------|------|------|--------|-------|-------|------|------|------|------|------|--------------------|
| Investment Grade | 0.0% | 0.0% | 1.4% | 10.3% | 8.7% | 7.5% | 5.6% | 2.8% | 1.0% | 1.6% | 3.9% |
| Speculative | 0.0% | 0.0% | 100.0% | 0.0% | 25.0% | 0.0% | | | | 0.0% | 17.9% |
| Total | 0.0% | 0.0% | 2.9% | 10.2% | 9.2% | 7.3% | 5.6% | 2.8% | 1.0% | 1.6% | 4.1% |

When the 10-year averages of the 3-year cumulative default rates are analyzed, it is seen that there is a significant default rate differentiation. The average cumulative default rates over the last ten years varies dramatically between the two categories, as shown in the table above.

4. TRANSITION MATRIX RESULTS

The transition matrix is a table that illustrates the percentage or decimal distribution of the companies' ratings that they had at the beginning of the period according to the ratings that they had at the end of the period for the companies. Ratings of the companies whose contracts are not renewed during the calculation periods are not considered in the transition matrix computations, but their figures are provided in the tables for information purposes. As the structured finance ratings' validity time are dictated by the maturity of the security subject to financing, they are not included in the transition matrix analysis.

Transition matrix results for the last 3 years are given in the tables below.

Table 14: Transition Matrix between 2020-2023 based on the Ratings

| Rating | AAA | AA+ | AA | AA- | A+ | A | A- | BBB+ | BBB | BBB- | BB+ | BB | BB- | B+ | В | B- | ccc | cc | С | D | Default | W/D | Total |

| Total | 103 | 72 | 139 | 139 | 178 | 196 | 188 | 156 | 143 | 138 | 66 | 36 | 15 | 12 | 4 | 1 | 3 | 6 | 1 | 0 | 14 | 113 | 1723 |

As can be seen from the tables above, there are sufficient number of observations only for 2022-2023 period to make an evaluation on the basis of the ratings. For other two periods there is not sufficient number of observations. The stability of rating scores is high at higher grades in the transition matrix for 2022-2023 period. It may be misleading to make an inference due to the low number of observations in low grades. In order to make a sound assessment rating are grouped and the results of the study is given in the tables below.

Table 17: Transition Matrix between 2020-2023 based on the Ratings Groups

| Rating Group | AAA to AA- | A+ to A- | BBB+ to BBB- | BB+ to BB- | B+ to B- | CCC & Below | Default | W/D | Total |
|--------------|------------|----------|--------------|------------|----------|-------------|---------|-----|-------|
| AAA to AA- | 83.3% | 10.0% | 3.3% | | | | 3.3% | 2 | 32 |
| A+ to A- | 41.0% | 53.8% | 2.6% | | | | 2.6% | 5 | 44 |
| BBB+ to BBB- | 7.4% | 51.9% | 40.7% | | | | | 10 | 37 |
| BB+ to BB- | | | 100.0% | | | | | 1 | 2 |
| B+ to B- | | | | | | | | 0 | 0 |
| CCC & Below | | | | | | | | 0 | 0 |
| Total | 43 | 38 | 14 | 0 | 0 | 0 | 2 | 18 | 115 |

Table 18: Transition Matrix between 2021-2023 based on the Ratings Groups

| Rating Group | AAA to AA- | A+ to A- | BBB+ to BBB- | BB+ to BB- | B+ to B- | CCC & Below | Default | W/D | Total |
|--------------|------------|----------|--------------|------------|----------|-------------|---------|-----|-------|
| AAA to AA- | 90.2% | 9.8% | | | | | | 11 | 245 |
| A+ to A- | 21.1% | 69.6% | 7.9% | | 0.4% | | 1.1% | 10 | 290 |
| BBB+ to BBB- | 1.6% | 36.4% | 57.6% | 3.6% | 0.4% | | 0.4% | 13 | 263 |
| BB+ to BB- | | 2.2% | 40.4% | 50.6% | 1.1% | | 5.6% | 5 | 94 |
| B+ to B- | | | 22.2% | 11.1% | 33.3% | | 33.3% | 3 | 12 |
| CCC & Below | | | | | | | | 0 | 0 |
| Total | 274 | 311 | 204 | 55 | 6 | 0 | 12 | 42 | 904 |

Table 19: Transition Matrix between 2021-2023 based on the Ratings Groups

| Rating Group | AAA to AA- | A+ to A- | BBB+ to BBB- | BB+ to BB- | B+ to B- | CCC & Below | Default | W/D | Total |
|--------------|------------|----------|--------------|------------|----------|-------------|---------|-----|-------|
| AAA to AA- | 90.7% | 8.5% | 0.4% | | | | 0.4% | 22 | 482 |
| A+ to A- | 6.8% | 83.7% | 8.9% | | 0.2% | | 0.4% | 34 | 560 |
| BBB+ to BBB- | | 18.1% | 77.3% | 3.7% | 0.2% | | 0.7% | 32 | 490 |
| BB+ to BB- | | | 23.7% | 71.2% | 3.6% | | 1.4% | 16 | 155 |
| B+ to B- | | | 7.1% | 7.1% | 64.3% | 14.3% | 7.1% | 4 | 18 |
| CCC & Below | | | | | 7.7% | 61.5% | 30.8% | 5 | 18 |
| Total | 453 | 562 | 437 | 117 | 17 | 10 | 14 | 113 | 1723 |

On the basis of rating groups, the transitions are considered as within reasonable levels.

Best Regards,
