Key rating drivers, as strengths and constraints, are provided below.

Strengths

- Solid backlog value underpinning visibility of future revenue generation via joint ventures,
- Low collection risk and high quality of accounts receivables,
- Advances received at the initiation of projects limiting external financing in a certain extent.

Constraints

- Newly operating and lack of availability of independent audit reports for past periods, limiting trend analysis,
- Investment appetite reduced by gloomy global economic developments and downwardly revised growth forecasts,
- Susceptibility to risks inherent in tender-based business and potential threat to timely progress payments,
- Improvement needs in risk management framework and corporate governance compliance policies,
- In the shadow of geopolitical risks, leading economic indicators point to continued weakness in global demand conditions, whereas actions for a soft-landing are at the forefront.

Considering the aforementioned drivers, the Company's Long-Term National Issuer Credit Rating has been assigned as 'BBB- (tr)'. The Company's contractual and longstanding business relationship with public institutions and solid backlog value, low collection risk, as well as relatively lack of financial data that reflects the Company's financial profile have been evaluated as important indicators for the determination of the ratings with the outlooks for the Long and Short-Term National Issuer Credit Ratings as 'Stable'. Sustainability of the Company's sales performance, cash and EBITDA generation performance, together with the trends in the industry and national policy implementation to the sector, are the issues to be monitored by JCR Eurasia Rating. The macroeconomic indicators at national and international markets, as well as market conditions and legal framework about the sector will also be monitored.
